

Amendment to the Specification

Please replace the paragraph beginning on page 1, line 14 with the following amended paragraph:

---

a! The conventional modular pattern testing tools used in aging or temperature and humidity testing chambers do not have synchronizing capability. Panels during testing are driven by a plurality of cards ~~SG-cards~~ power supplied by a control box. The cards that drive image or data or display or signals to a display panel are called "Signal Generator cards (SG cards)" and the control box is only used as a power supply and is not capable of synchronizing the SG cards driving the panels to display the pattern. Thus, each of the panels operates independently.
